### Strategic Investment Memorandum

Transforming Renters into Homeowners Through Data-Driven Home Ownership Assessments | Confidential Investor Document | June 2026

This memorandum provides an overview of KeyOwn Habitat's Home Ownership Advisory Service (HOAS), outlining the market opportunity, business model, revenue strategy, operational framework, and growth roadmap. It is intended to facilitate discussions with prospective investors, strategic partners, and stakeholders regarding the scalability and long-term potential of the platform.

## **Executive Summary & Investment Thesis.**

The Indian residential real estate market is undergoing a structural transition characterised by an inventory-credit paradox. In the premium and mid-market segments across India's top metropolitan areas, developers face substantial unsold inventory, while millions of salaried and self-employed tenants continue to pay high monthly rents without building equity. Traditional PropTech players and mortgage brokers focus strictly on immediate transaction closures, ignoring whether the buyer is actually financially ready. This leads to high mortgage loan rejection rates, severe buyer distress, and long-term rental dependency.

Keyown Habitat's Home Ownership Advisory Service (HOAS) addresses this gap by establishing an education-first, advisory-led credit and capital alignment platform. Operating as an asset-light service layer rather than a direct real estate acquirer or a traditional broker, HOAS assesses consumers' financial profiles and guides them along a structured trajectory of immediate, credit-optimised purchase (Ownership Ready).

From an investment perspective, HOAS represents a highly scalable, high-margin PropTech model. Unlike traditional capital-heavy property platforms which require massive debt and equity to buy physical properties. HOAS completely avoids balance sheet real estate exposure. Instead, it uses an advisory model with three distinct revenue streams: non-refundable tenant advisory fees, developer transaction commissions, and bank mortgage commissions. This diversified model yields an operating profit margin of approximately 75.28% and ensures stable, predictable cash flows even during broader market slowdowns.

## **Macroeconomic Analysis: The Inventory and Credit Underwriting Paradox.**

To evaluate the HOAS market opportunity, it is essential to examine the supply and credit trends shaping the Indian residential sector in 2026.

### **Unsold Housing Inventory Overhang**

By the end of Q1 2026, unsold housing inventory across India's top seven metropolitan cities reached an aggregate of 6,01,210 units. This represents a 4% increase quarter-on-quarter and a 7% increase year-on-year, indicating that incoming residential supply has outpaced sales absorption.

The geographic distribution and quarterly dynamics of this unsold inventory are outlined below :

| Metropolitan Region              | Unsold Stock (Q1 2026 Units) | QoQ Change (%) | Buyer Leverage and Micro-Market Dynamics                                          |
|----------------------------------|------------------------------|----------------|-----------------------------------------------------------------------------------|
| Mumbai Metropolitan Region (MMR) | ~1,84,000                    | 5%             | Heavy inventory concentration in outer corridors like Thane.                      |
| Bengaluru                        | ~1,12,000                    | 12%            | Steepest quarterly jump; launches outstripped absorption, giving buyers leverage. |
| Hyderabad                        | ~1,06,000                    | 7%             | High inventory build-up, heavily concentrated in West Hyderabad.                  |
| National Capital Region (NCR)    | ~1,00,000                    | 4%             | Mild accumulation, primarily located in Noida Extension.                          |
| Pune                             | ~83,000                      | 3%             | Moderate overhang, concentrated in Wagholi and Hinjewadi.                         |
| Chennai                          | ~38,000                      | 2%             | Overhang is limited and concentrated in central OMR.                              |
| Kolkata                          | ~22,000                      | 1%             | Market remains tight, mostly premium South Kolkata focus.                         |

This growing inventory overhang, particularly the 12% quarterly surge in Bengaluru, shifts negotiating power to buyers. While developers maintain stable headline marquee prices to protect project valuations, they are increasingly offering indirect discounts, such as waiving floor rise charges, absorbing stamp duty and registration costs, and offering flexible payment timelines. HOAS leverages this developer desperation, securing favourable terms for its credit-ready advisory graduates.

## The Credit Underwriting Gap and Rent Trap

The primary bottleneck preventing the absorption of this unsold inventory is a strict credit underwriting gap. Across India, financial institutions reject approximately 30% of mortgage and credit applicants, often without providing transparent explanations. Banks typically require a minimum CIBIL credit score of 700 to 750 for mortgage approval. Furthermore, lenders impose strict debt-to-income limits, mandating that the total of all active monthly EMI obligations must not exceed 50% of the applicant's net monthly income.

In India's Tier-1 cities, residential rental yields are low, averaging between 2.0% and 4.0%, while home loan interest rates range from 8.0% to 9.5%. This wide spread between rental yields and borrowing costs makes home purchasing seem financially out of reach for many. Consequently, tenants remain stuck in long-term rental cycles, paying out substantial sums over ten-year periods without creating any equity. This "rent trap" is driven by credit score confusion, a lack of documented income proof for self-employed individuals, and a lack of structured advisory guidance.

## HOAS Product Architecture & Value Proposition

HOAS uses a unified, direct-acquisition product architecture to address these credit and financial barriers, guiding customer assessment directly toward successful immediate homeownership.

### The Ownership Ready Path (Direct Buy)

For consumers who meet or can quickly reach the required credit, documentation, and income criteria, HOAS provides a direct, risk-mitigated path to home acquisition. The platform conducts a detailed CIBIL review, structured debt planning, and document verification. It helps buyers optimise their Loan-to-Value (LTV) ratio to secure the most favourable interest rates from lenders :

$$\text{Loan-to-Value (LTV) Ratio} = \left( \frac{\text{Loan Amount}}{\text{Appraised Property Value}} \right) \times 100\%$$

By resolving documentation errors and verifying the buyer's actual repayment capacity, HOAS reduces bank rejection rates and streamlines the purchase process.

## Comparative Financial Analysis: Rent vs. Immediate EMI

An evaluation of the financial implications of transitioning from renting to direct homeownership through the structured HOAS framework is compared in the table below.

| Particulars                  | Renting a Home                         | Owning a Home (EMI)             |
|------------------------------|----------------------------------------|---------------------------------|
| Monthly outflow              | ₹25,000–₹40,000 Rent                   | ₹26,756–₹45,000 EMI @8%         |
| Payment trend                | Typically Increases 5% to 10% annually | Mostly fixed / controlled       |
| Total outflow in 120 months  | ₹48–₹76 Lakhs (approx)                 | ₹33–₹54 Lakhs (approx)          |
| Where does money go?         | To House owner                         | To your own property            |
| Ownership after 120 Months   | ✗ No                                   | ✓ Yes                           |
| Long-term benefit            | None                                   | Asset Creation & Ownership      |
| Equity Creation              | No                                     | Yes                             |
| Long-Term Wealth             | No                                     | Potential Property Appreciation |
| Family Stability             | Temporary                              | Permanent                       |
| Financial Outcome            | Expense                                | Asset Creation                  |
| Legacy Value                 | None                                   | Transferable Asset              |
| Asset Building               | No                                     | Yes                             |
| Financial Discipline         | Rent Expense                           | Builds Ownership Equity         |
| Asset Value after 120 Months | ₹0                                     | Property Value + Appreciation   |

## Strategic Differentiation: Asset-Light Advisory vs. Capital-Heavy PropTech Models

The HOAS model differs fundamentally from traditional asset-heavy real estate models.

### The Capital Drag of Physical Real Estate Integration

Many modern housing platforms attempt to solve homeownership by acquiring homes directly, hoping to rent or sell them back to customers. While appealing, this model carries significant capital drag and structural risks :

- **Heavy Balance Sheet Requirements:** Operators must raise massive institutional debt and equity to purchase physical properties, severely limiting their speed of expansion
- **Asset Maintenance Liabilities:** Ongoing property taxes, insurance, vacancy periods, and physical upkeep drain cash flow and degrade operating margins.

- **Default and Liquidity Risks:** If a customer defaults or experiences financial hardship, the company is left carrying high-interest inventory liabilities and facing costly property turnarounds.

## The HOAS Advantage

HOAS avoids these structural risks entirely by operating as a pure financial advisory and transactional match platform, keeping its business asset-light

- **Zero Property Acquisition Costs:** HOAS does not purchase physical real estate, allowing it to scale rapidly across states without heavy capital requirements.
- **No Asset Exposure:** The platform carries no property holding, maintenance, or valuation risks, keeping its balance sheet completely insulated.
- **Aligned Incentives:** Rather than taking on real estate risk, HOAS acts as an independent advisor, helping tenants clear credit and documentation bottlenecks so they can purchase homes directly from RERA-approved developers.

This capital-efficient approach allows HOAS to scale dynamically without the capital drag or inventory liabilities of traditional property-owning PropTech models.

## High-Margin Service-Based Revenue Model

HOAS uses a three-channel, service-based revenue architecture. This model avoids the capital-heavy requirements of buying physical properties, instead generating steady cash flow and scalable backend commissions.

### Revenue Stream 1: Tenant Advisory Service Fee

HOAS charges a non-refundable, upfront service fee of ₹9,999 for its financial assessments and customised roadmaps. This fee-first structure acts as an organic filter, attracting high-intent consumers and funding daily operations.

The platform's highly scaled daily customer acquisition pipeline operates on a data-backed sales funnel across our team of 30 tele callers :

6,000 Daily Calls → 600 Interested Leads (10%) → 60 Meetings (10%) → 30 Closures

Per individual representative, this maps to a disciplined daily routine:

200 Calls → 20 Interested (10%) → 2 Meetings (10%) → 1 Closure (50% Meeting-to-Close)

This highly structured sales conversion process ensures highly predictable, daily cash generation.

### Revenue Stream 2: Property Owner/Builder Commission

When advisory clients transition into home purchasing, HOAS earns up to a 2% commission from property developers on successful transactions. With an average property value of ₹50 Lakhs in the targeted mid-market residential segment, each transaction yields a ₹1,00,000 commission. This stream is highly scalable, as developers are eager to pay standard commissions to clear their unsold inventory.

### Revenue Stream 3: Bank Mortgage Commission

On successful loan disbursements for credit-ready advisory graduates, HOAS receives up to a 1% payout commission from the lending banks. Backed by verified documentation and pre-approved repayment capacities, these applications represent high-quality leads that banks are happy to incentivise.

### Projections, Cost Structure, and Operational Scale

The HOAS business model exhibits high operational leverage, translating revenue growth into strong profitability due to its low fixed-overhead structure

### Volume and Revenue Performance

By operating at a projected volume of exactly 30 successful HOAS enrolments per day over a 30-day billing period, the platform generates a high-velocity monthly volume of 900 successful closures :

Monthly Closures = 30 Closures/day × 30 days = 900 Closures/month

At the standard advisory rate of ₹9,999 per customer, this single channel yields a substantial monthly revenue run-rate :

$$\text{Monthly Revenue} = 900 \text{ Closures} \times \text{INR } 9,999$$

$$\text{Closure} = \text{INR } 89,99,100 \approx \text{INR } 90 \text{ Lakhs/mon}$$

This operational velocity scales to an impressive annualised top-line from advisory services alone, completely excluding additional commission, referral, or ancillary streams :

$$\text{Annual Revenue} = \text{INR } 89,99,100 \times 12 \text{ months} = \text{INR } 10,79,89,200$$

$$= \text{INR } 10,79,89,200 \approx \text{INR } 10.8 \text{ Crores/year}$$

### Phase 1 Setup and Operational Capacities

To support high-volume inbound and outbound execution, the organisational footprint is structured into specialised client-acquisition, lead-management, and field advisory squads.

#### Total Team Strength: 44 Employees

| Department             | Role                                       | Count     |
|------------------------|--------------------------------------------|-----------|
| Sales                  | Telecallers                                | 30        |
| Sales                  | Team Leaders                               | 3         |
| HOAS Advisory          | Home Ownership Advisors / Field Executives | 10        |
| Operations             | Sales Manager                              | 1         |
| <b>Total Employees</b> | <b>Only Sales</b>                          | <b>44</b> |

## Reporting & Operational Hierarchy Flow

- **Office Space Requirement:** 2,000–3,000 Square Feet central metropolitan headquarters.
- **Daily Operational Performance Capacity:**

Daily Calling Capacity: 6,000 Calls (30 tele callers × 200 calls/day each)

Daily HOAS Meetings Capacity: 50 Meetings (10 Advisors × 5 Meetings Per Day)

This organisational structure creates a substantial capacity buffer, allowing advisors to support up to 50 meetings per day and easily absorb the targeted 30 daily closures.

## Granular Monthly Operating Expense (OpEx) Breakdown

To achieve sustainable, cash-flow-positive growth, HOAS maintains a highly disciplined cost structure capped at exactly ₹22,25,000 per month. This budget completely supports employee cost, calling infrastructure, lead generation databases, and legal overheads:

### 1. Employee Cost Breakdown:

- **30 Tele callers:** ₹9,00,000 (Base salary of ₹30,000 per month each)
- **3 Team Leaders:** ₹1,50,000 (Base salary of ₹50,000 per month each)
- **10 Home Ownership Advisors / Field Executives:** ₹4,50,000 (Base salary of ₹45,000 per month each)
- **1 Sales Manager:** ₹1,10,000 (Base salary of ₹1,10,000 per month)
- **Total Monthly Employee Cost: ₹16,10,000**

### 2. Operational Cost Breakdown:

- **Office Rent:** ₹2,00,000 (Central metro hub, 2,000–3,000 Sqft)
- **Electricity & Internet:** ₹25,000 (Centralised broadband and utility lines)
- **CRM & Software:** ₹25,000 (SaaS licenses, database tracking, and lead routing)
- **Calling Infrastructure:** ₹50,000 (VoIP dealers, SIM channels, and calling lines)
- **Marketing & Lead Generation:** ₹2,00,000 (Targeted digital ads and database list acquisitions)
- **Travel & Field Expenses:** ₹75,000 (Advisors' travel and face-to-face field logistics)
- **Miscellaneous Expenses:** ₹40,000 (Legal, general admin, and sundry expenses)
- **Total Monthly Operational Cost: ₹6,15,000**

### 3. Total Monthly Business Cost Summary:

| Expense Category          | Monthly Cost (INR) | Annualized Outlay (INR) | Resource Metric / Calculation Driver                     |
|---------------------------|--------------------|-------------------------|----------------------------------------------------------|
| Employee Cost             | ₹16,10,000         | ₹1,93,20,000            | Payroll for 44 total staff members                       |
| Operational Cost          | ₹6,15,000          | ₹73,80,000              | Office setup, infrastructure, marketing, and SaaS        |
| <b>Total Monthly Cost</b> | <b>₹22,25,000</b>  | <b>₹2,67,00,000</b>     | <b>Capped strictly within Phase 1 budget constraints</b> |

### Operating Surplus and Profitability Profile

Comparing this robust top-line with the optimised ₹22.25 Lakh monthly operational budget demonstrates the immense profitability of Keyown Habitat's model :

$$\begin{aligned} \text{Monthly Operating Surplus} &= \text{INR } 89,99,100 - \text{INR } 22,25,000 \\ &= \text{INR } 67,74,100 \approx \text{INR } 67.7 \text{ Lakhs/month} \end{aligned}$$

This provides a net operating profit margin (EBITDA) of approximately 75.28% on advisory services alone

$$\text{Operating Profit Margin} = \left( \frac{67,74,100}{89,99,100} \right) \times 100 \approx 75.28\%$$

This exceptional financial profile is driven entirely by the asset-light, advisory-led model, enabling the platform to remain highly cash-flow positive from day one without inventory liabilities.

## Investment Addendum

### 01 Founder Profile

KeyOwn Habitat is founded and led by a professional with over 15 plus years of cross-domain expertise spanning Real Estate and Banking & Finance — the two disciplines at the very heart of the HOAS model.

Having worked at the intersection of property markets and financial advisory, the founder witnessed firsthand how the absence of structured credit guidance permanently locks millions of Indian renters out of homeownership. This direct, lived experience — combined with deep domain knowledge — is what makes KeyOwn Habitat uniquely positioned to solve this problem.

| 15+ Years       | Real Estate & Banking | Bengaluru          | Solo Founder        |
|-----------------|-----------------------|--------------------|---------------------|
| Work Experience | Dual Domain Expertise | Base of Operations | Full Accountability |

- **Real Estate Expertise:** Deep knowledge of India's residential property market, developer relationships, RERA compliance, and buyer advisory across premium and mid-market segments.
- **Banking & Finance:** Hands-on experience with mortgage underwriting, CIBIL frameworks, debt-to-income structuring, and bank lending partnerships — directly powering HOAS's credit-first advisory model.
- **Sales Leadership:** Proven ability to build and manage high-performance sales teams, tele calling operations, and revenue pipelines in advisory businesses.
- **Founder-Market Fit:** This is not an outsider solving a theoretical problem. The founder has lived and operated at this intersection for over a decade, making KeyOwn Habitat a conviction-driven venture.

### 02 Community Investment Ask

Rather than seeking a single large investor, KeyOwn Habitat is opening a community investment round allowing everyday individuals to participate with amounts as small as ₹50,000. This approach democratises startup investing and builds a community of stakeholders who are personally invested in the company's success.

|                                |                                            |
|--------------------------------|--------------------------------------------|
| <b>Total Raise</b>             | ₹25,00,000 (Twenty Five Lakhs)             |
| <b>Minimum Investment</b>      | ₹50,000                                    |
| <b>Maximum per Investor</b>    | ₹25,00,000                                 |
| <b>Target Community Size</b>   | 25 Investors                               |
| <b>Revenue Share</b>           | 4% of Monthly Gross Revenue (Proportional) |
| <b>Agreement Duration</b>      | 12 Months                                  |
| <b>Principal Return</b>        | 100% at Month 12                           |
| <b>Projected Annual Return</b> | Up to 43%                                  |

### Projected Returns by Investment Amount

| Your Investment | Monthly Payout* | 12-Month Earnings* | Total Received* |
|-----------------|-----------------|--------------------|-----------------|
| ₹50,000         | ₹900            | ₹10,800            | ₹60,800         |
| ₹1,00,000       | ₹1,800          | ₹21,600            | ₹1,21,600       |
| ₹1,50,000       | ₹2,700          | ₹32,400            | ₹1,82,400       |
| ₹2,00,000       | ₹3,600          | ₹43,200            | ₹2,43,200       |

\*Based on projected monthly revenue of ₹90 Lakhs. Actual returns depend on business performance.

### 03 Use of Funds

Every rupee of the ₹25 Lakh raise is allocated across one-time startup costs and first month operational expenses. The allocation is lean, disciplined, and entirely focused on building revenue-generating capacity from Day 1.

#### One-Time Startup Costs

| Head                                                | Amount           | % of Raise |
|-----------------------------------------------------|------------------|------------|
| Office Security Deposit (2 months rent)             | ₹4,00,000        | 16%        |
| Office Setup Cost (furniture, equipment, interiors) | ₹1,00,000        | 4%         |
| <b>Total One-Time Costs</b>                         | <b>₹5,00,000</b> | <b>20%</b> |

#### Month 1 Operational Costs

| Where Your Money Goes                              | Amount     | % of Raise |
|----------------------------------------------------|------------|------------|
| Sales Team — 30 Telecallers + 3 Team Leaders       | ₹10,50,000 | 42%        |
| HOAS Advisors — 10 Field Executives and admin team | ₹4,50,000  | 18%        |
| Office Rent & Infrastructure (2,000–3,000 sq ft)   | ₹2,25,000  | 9%         |

|                                       |                   |             |
|---------------------------------------|-------------------|-------------|
| Marketing & Lead Generation           | ₹2,00,000         | 8%          |
| CRM, Software, Travel & Miscellaneous | ₹75,000           | 3%          |
| <b>Total Month 1 Operations</b>       | <b>₹20,00,000</b> | <b>80%</b>  |
| <b>GRAND TOTAL RAISE</b>              | <b>₹25,00,000</b> | <b>100%</b> |

From Month 2 onwards, operations are fully self-funded from advisory fee revenue. The ₹25L covers only the one-time launch costs and first month — after which the business generates its own cash flow.

#### 04 Growth Roadmap — 12 Month Plan

The ₹25L investment funds a structured, milestone-driven launch. Here is exactly what happens month by month:

|                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Month 1-2</b><br>SETUP & LAUNCH  | <ul style="list-style-type: none"> <li>Office space secured and set up in central Bengaluru</li> <li>Security deposit and setup costs paid</li> <li>50-member team hired and trained</li> <li>CRM, calling infrastructure and lead databases deployed</li> <li>RERA developer partnerships signed</li> <li>Bank mortgage commission agreements finalised</li> <li>Investor revenue share payouts begin from Month 2</li> <li>First HOAS advisory closures begin</li> </ul> |
| <b>Month 3-4</b><br>FIRST REVENUE   | <ul style="list-style-type: none"> <li>Tele calling operations at full capacity (6,000 calls/day)</li> <li>First developer commissions earned</li> <li>First bank mortgage disbursements processed</li> <li>Target: 15-20 closures/day by end of Month 3</li> </ul>                                                                                                                                                                                                        |
| <b>Month 5-6</b><br>FULL VELOCITY   | <ul style="list-style-type: none"> <li>30 closures/day achieved — full revenue run-rate</li> <li>Monthly advisory revenue reaching ₹90 Lakhs</li> <li>Operating profit margin stabilising at 75%+</li> <li>Investor monthly payouts at projected levels</li> <li>Brand reputation building through client success stories</li> </ul>                                                                                                                                       |
| <b>Month 7-12</b><br>SCALE & EXPAND | <ul style="list-style-type: none"> <li>Consistent 900+ closures/month</li> <li>Developer and bank partnership network expanded</li> <li>Second city expansion planning (Hyderabad or Mumbai)</li> <li>Full principal repayment to all investors at Month 12</li> <li>Option to renew investment agreement for Phase 2</li> </ul>                                                                                                                                           |

## 05 Risk Factors & Mitigation

KeyOwn Habitat believes in full transparency. Below are the key risks associated with this investment and how the business is structured to mitigate them.

| Risk                                   | Potential Impact                      | How We Mitigate It                                                                         |
|----------------------------------------|---------------------------------------|--------------------------------------------------------------------------------------------|
| Revenue ramp-up slower than projected  | Monthly payouts lower in early months | Payouts begin Month 2 and build progressively. Month 12 returns include full catch-up      |
| Telecaller team underperforms          | Fewer advisory fee collections        | Daily CRM tracking with 3 supervisors. Underperformers                                     |
| Developer or bank partnerships delayed | Commission streams take longer        | Advisory fee revenue (Stream 1) is independent — funds operations while partnerships build |
| Real estate market slowdown            | Reduced buyer interest                | HOAS is counter-cyclical — slowdowns increase unsold inventory and motivated developer     |
| Principal repayment at Month 12        | Business cash flow required           | ₹67L+ monthly operating profit means ₹25L repayment is comfortably covered                 |

## Regulatory Framework & Compliance Mechanics

Operating in India's real estate sector requires strict compliance with the Real Estate Regulatory Authority (RERA) guidelines. HOAS mitigates compliance risks while driving positive outcomes for all market participants.

## Regulatory Compliance and RERA Alignment

Under RERA guidelines, real estate brokers and advisors must register with their respective state regulatory authorities. Failure to comply can lead to steep penalties of up to 10% of the property value or daily fines of ₹10,000.

HOAS ensures compliance by maintaining active registrations across its operating states and exclusively listing RERA-certified projects. All property descriptions are standardised based on RERA-mandated "carpet area" metrics rather than ambiguous "super built-up" areas, which builds trust with both buyers and regulators. By integrating RERA-verified project data into its advisory stage, HOAS protects consumers from regulatory risks and delayed project handovers.

## **Mitigating Balance Sheet and Default Risks**

Traditional property platforms often struggle with high capital requirements and market volatility. For instance, platforms that buy properties directly are exposed to vacancy issues, property maintenance costs, and interest rate fluctuations.

HOAS avoids these risks entirely by operating as a pure advisory and financial preparation platform. It does not buy or hold real estate assets. If an advisory client experiences financial difficulties during processing, there are no balance sheet implications or property foreclosure concerns for HOAS. All cash flows are strictly service-based, eliminating asset risk for the platform.

## **Strategic Valuation and Growth Recommendations**

Based on this analysis of Keyown Habitat's HOAS business model and the Indian real estate market, several strategic recommendations are proposed for venture capital allocation:

### **1. Integrate with Digital Public Infrastructure (DPI)**

To lower customer acquisition costs and speed up financial assessments, HOAS should integrate with India's Digital Public Infrastructure. Connecting with Aadhaar, the Account Aggregator network, and UPI will allow the platform to instantly verify incomes, review bank statements, and assess creditworthiness, making the onboarding process faster and more secure.

### **2. Form Strategic Partnerships with High-Overhang Developers**

With unsold inventory rising, particularly in cities like Bengaluru and Hyderabad, HOAS is in a strong position to partner directly with major developers. By matching credit-ready graduates with builders eager to clear inventory, HOAS can negotiate exclusive discounts and flexible payment plans, increasing transaction volumes and developer commissions.

### **3. Build a Collaborative Bank and Lender Network**

By delivering pre-screened mortgage applicants who have already completed documentation and credit prep, HOAS helps lenders lower their loan rejection rates. Formulating direct API integrations with banks and non-banking financial companies (NBFCs) can secure faster loan approvals for graduates while ensuring a steady flow of mortgage commissions for the platform.

### **4. Capitalise on Asset-Light Scalability**

The key strength of the HOAS model is its low overhead and high operating margin (~75.28%). Capital should be directed toward marketing, advisory talent, and platform software rather than physical property acquisition, allowing the business to expand nationally without

balance sheet drag. This pure advisory and service model ensures the platform remains highly scalable and resilient throughout real estate market cycles.
